

Proactive Warehousing (PWH)

The game of competition is quality, cost and delivery. With everything being equal, cost will become the differentiating factor in customers' buying decisions. One of the areas where cost management can be very promising is in the warehousing function in which space, safety, security, interest rate and other inventory carrying costs are huge and fast increasing.

The Effective Warehousing System seminar takes up the concepts and efficient practices that will clarify the critical role of the warehouse as a factor in overall cost and efficiency of the company. It will integrate concepts of continuous improvement and Total System Approach in the warehousing function. This seminar is developed for warehouse managers, supervisors and practitioners who would like to adopt new warehouse practices, and; for materials managers, systems analysts, finance people, marketing and production staff who would like to understand how the warehouse relates to their own functions.

Objective: By the end of the seminar, the participant would have refreshed and enhanced his/her working knowledge and skills of the warehousing function.

Agenda:

- Warehouse: A necessity?
- Warehouse Concepts
- ABC Classification of Materials
- Warehouse Layout
- Stock Locator
